Excerpt: .items of knowledge which are obtainable mainly in the laboratory, but which are very essential for the correct diagnosis of a concrete failure. The effect of workmanship is by far the largest factor, and in it all others are included, for a poor workman can destroy the value of the best materials. Under the head of workmanship must be considered such items as design, proportions, placing, and actions resulting from heat, frost, electrolysis, etc., which should have been taken care of during the process of making, hardening and preservation. As another element of importance, it must always be kept in mind that the water used in making the concrete, or which may come in contact with it, may prove to be a very influential factor for harmful results. Then, if one is given a concrete failure to diagnose one must look for a reason...
