Rarebooksclub.com, United States, 2012. Paperback. Book Condition: New. 246 x 189 mm. Language: English . Brand New Book ***** Print on Demand *****.This historic book may have numerous typos and missing text. Purchasers can download a free scanned copy of the original book (without typos) from the publisher. Not indexed. Not illustrated. 1908 Excerpt: .provided we cannot give it supports which are almost as good as fixed. It is also essential in such a case that the supports are placed with the utmost care in those positions as assumed in the computations. Of course not every truss is affected by a displacement of its supports. So, for instance, a truss, resting on two supports and with one movable end, a cantilever truss or a three-hinged arch are free from this influence. On the other hand, a continuous truss is very susceptible to the influence of a yielding of the foundations or a settlement of the piers (particularly so if very massive Continuous truss over three supports. We will suppose that the center pier of a continuous truss over three supports yields vertically to the amount of D inches, Fig. 44. Such a displacement reduces the center reaction an amount X , which, when found, enables us to compute the stresses in the truss members, and consequently also the secondary stresses. In order to find X , we let: 4 Fig. 44e place a load equal to unity at the center of the truss, the latter assumed to be resting on its end supports only, and determine the deflection D_t at the center due to this load $=1$. If we now apply a load X at the center of the truss, then the deflection will be XD_t , but as this deflection must be equal to the supposed deflection D , we have $XD_t = D$,...
