Reviews

A whole new eBook with a brand new point of view. It is definitely simplistic but shocks in the 50 percent of the publication. I am just pleased to explain how this is the greatest ebook i have read during my very own daily life and could be he best ebook for possibly.

Excerpt: . . . 14 2 131 The effect of reducing the longitudinal modulus of the material from GN m mass to GN m2 increases the panel about when compared to aluminum wing 111 7 panels throughout the entire load range. heavily-loaded panels, this has For the same effect reducing the allowable average panel strain for the higher as 0. 0014. modulus material by However, for lightly-loaded panels, the reduction in allowable strain does not increase panel mass because these panels are stif-ness-critical and do not reach the limits of material strength. Tradeoffs such as this should be considered during any design evaluation. The effect of discrete-stiffness design on structural efficiency was also evaluated and the results for blade-stiffened panels are shown figure 20. in A The Material properties were used to generate these curves and the one repre-0 senting designs with plies in the skin is the same as the curve shown in figure 19. The curve labeled Fscrete stiffness has the same constraint con-ditions as the curve labeled pliesoin the skin and also satisfies an additional 8 90 constraint of having only and material in the skin. The results of 3. 5 3 figure 20 show there is a penalty of about for panels with no high-stiffgeess material in the skin when compared with minimum-mass designs that include 0 plies in the skin. 46 However, a substantial mass saving of between percent for lightly-loaded panels and percent for those designed for about MPa 37 6 still remains. One important aspect of the discrete-stiffness codcept which remains to be evaluated is whether...
